Detention Pond Specifications

Design Storage Volume: _____

As-built Storage Volume: _____

Designed Outlet Device Type: _____

As-built Outlet Device Type: _____

Designed Outlet Device Dimensions: _____

As-built Outlet Device Dimensions: _____

By placing my professional stamp and signature on this paper, I certify that this detention pond is constructed according to the approved design on file with the City of Fayetteville at the above stated address and that all embankments and spillways meet State of Georgia standards for dam construction and safety, as applicable. I further certify that all the drainage area designed to drain to this pond in fact does drain to said pond and the outflow from the pond is equal to or less than the maximum allowable outflow for all storm design frequencies (i.e. 2-, 5-, 10-, 25-, 50-, and 100-year storms). Calculations (Hydrology Study) to determine the above information must be kept in your file in the event they are needed by the City of Fayetteville to verify this information.

I further certify that all stormwater BMPs are constructed in accordance with the approved design on file with the City of Fayetteville and meet the ordinance requirements for post-development stormwater management.
